

# MINI CUCUMBER

## VARIETIES DESCRIPTION

### Growing guidelines :

- Density should be 2 plts/m<sup>2</sup>
- Must be replanted 3 to 4 times a year
- Remove all fruits on the first 30-50cm of stem
- Keep fruits on each node thereafter
- Once plants have reached the wire, do not pinch the head and let everything grow. Pinch laterals 1 meter below the main wire

### Varieties available :

#### - **Jawell** : *Our best yielding variety !*

- Partial Powdery mildew Tolerant
- Year round planting
- CMVT and CVYVT
- 1-2 fruits per node
- Generative variety with nice vigorous laterals
- Early into production
- 14-16cm

#### - **Strong PMT ( Summer planting )**

- **Figaro** : 14-16cm. Generative variety
- **Manar** : 15-17cm. Vegetative variety with excellent fruit quality.
- **Tornac** : 15-17cm. Generative variety with high yield potential.
